Natural Gas Incentive Program

RMPU2 (9/2011)

Natural Gas has always been a good idea. Now, \$400 says Natural Gas is an even better idea!

Rocky Mount Public Utilities (RMPU) offers a Natural Gas Incentive Program to encourage area builders, developers, homeowners, or general contractors to install natural gas heating systems, water heaters, ranges, and clothes dryers in new construction for residential, commercial, and industrial buildings outside the City's electric territory. Customers converting or replacing an appliance from an energy source other than the City's electric system, such as propane, are also eligible. New construction also includes additions and expansion projects which add new space to an existing structure.

Rebates

- The incentive for a natural gas water heater installed in combination with natural gas as the primary heating source is **\$300**.
- The incentive for a natural gas clothes dryer new installation, conversion, or replacement is **\$50**.
- The incentive for a natural gas cooking range new installation, conversion, or replacement is **\$50**.
- The incentive for conversion or replacement from an existing fuel to a natural gas heating system is **\$100**.

- The incentive for conversion or replacement from an existing fuel to natural gas for water heating is **\$200**.

In total, customers can earn up to **\$400** per building. The installation of a natural gas heating system and water heater is NOT a condition for receiving either one or both of the available \$50 rebates.

Application, Verification, & Payment Process

To qualify for this program, customers must first submit an application prior to the installation of the eligible equipment. Applications may be submitted in writing on the Rocky Mount Public Utilities Natural Gas Incentive Application Form included in this brochure, completed online at www.rockymountnc.gov/utilities/builders.html or by calling (252) 972-1269.

The application form does not guarantee incentive payment, but informs RMPU of the customer's intent to install equipment that will qualify for the incentives.

The installation of eligible natural gas equipment will be verified at the time the Gas Division sets the gas meter. The meter can only be set after all natural gas equipment installations pass the required local inspection process. Once the meter is set and the eligible natural gas equipment installation is verified, the incentive payment check to the customer will be processed.

Natural Gas Incentive Program Application

Instructions: Fill in all fields, then mail to:
